DocForm: Intelligent, dynamic document & form generation & delivery

DocForm is a powerful, low-cost and easy-to-use software tool for the design, dynamic creation and real-time delivery of all electronic documents, forms and reports for every industry.

- Eliminate pre-preprinted forms and reduce costs.
- Quickly and easily create compelling documents, reports and forms from plain text data streams.
- Easily utilize data from mainframes, AS/400s, midrange systems and PCs.
- Access data directly from ODBC-compliant databases.
- Provide powerful, rapid and personalized document preparation and delivery.
- Speed up and simplify document delivery through print, send to file, PDF, e-mail and fax.

DocForm, from Prism Software Corporation, is available in both **Standard** and a more robust **Professional** version and works easily with your existing host system and requires no costly reprogramming.

How DocForm works

DocForm easily accepts your current host system's existing print or data stream and dynamically reformats the data into compelling and powerful documents, forms and reports, including invoices, statements, reports, modernizing gray/green bar reports, sales reports, one-to-one marketing materials, customized direct mailings, catalogs, employee handbooks, insurance and health forms and training materials.

Convenient side-by-side viewing for easy and fast document and form creation.

DocForm is an indispensable and cost-reducing tool used for document and data-intensive environments and legacy mainframes, midrange and AS/400 environments. The program can be used for dynamic generation of bar codes for multiple applications. All industries can benefit from DocForm, including health care, financial services, manufacturing, distribution, education, retail, government and legal.

> DocForm is easy to install and use.

The plug-and-play design of DocForm allows for easy configuration and installation. Save time and reduce costs by using multiple DocForm Designers for remote users or multiple local users.

Easy-to-design customized documents and forms

DocForm has an intuitive, easy-to-use drag-and-drop interface that allows for the quick design of professional business documents, forms and reports that improve communications with your customers, partners and employees.

Quickly give your documents the look and feel you want by easily changing fonts, colors and drawing elements. Add graphics, logos and data from outside applications and databases for even more appeal, and review and proof your merged documents onscreen prior to printing. Both local and remote personnel can easily and quickly design documents and forms, and they are easily changed, once designed.

solutions DocForm software

Convenient side-by-side viewing of the raw data next to the designed form provides easy reference as you design your document or form. No need to switch from one window to another.

Variable data printing

Manage diverse and complex data with DocForm. The input filters standardize the incoming data formats so that you can efficiently use your existing data streams.

> Manage diverse and complex data with DocForm.

Dynamically modify "floating" data or data overflow so that your documents always match what you designed. DocForm is the scalable, robust solution to handle all your variable data printing needs.

Powerful conditional processing

Realize the full power of DocForm with its easy-to-use conditional processing features that allow you to create conditional tests and business rules that add intelligence to your documents and forms.

Print special messages when certain conditions are met; route the finished document to different printers or distribution methods based upon selected criteria; these are just a couple of the near-infinite number of conditional scenarios you can create.

Establish specific trigger conditions to dynamically repurpose content so that a single input data stream can be distributed ("bursted") to multiple destinations.

The data stream can be formatted, on-the-fly, into Postscript, PCL, PDF and TIFF for print, e-mail, COLD or fax and routed to other applications.

Efficient document distribution

DocForm is a powerful tool for distributed printing. Dynamically print to any device on the network. Utilize your printers' native print drivers and specify advanced finishing features such as duplexing, stapling or saddle stitching. Save time and reduce costs associated with bursting, collating, sorting, organizing and manually distributing documents.

> DocForm is a powerful tool for distributed printing.

You can easily route documents across the building or around the world. Remote and local print, fax, save to file, save as a PDF and e-mail all your complex documents and forms.

DocForm and Toshiba devices

DocForm integrates perfectly with Toshiba printers, copiers and other devices in organizations that rely on efficient, quality document design and distribution. Call your Toshiba representative today for more information on how DocForm and other Toshiba Document Solutions can help your organization.
