

## iDriver: Print direct from AS/400 systems to Toshiba e-STUDIOS

Toshiba Document Solutions combine Toshiba e-STUDIO systems with powerful software applications and targeted business process improvements to enable you to more effectively *distribute, manage, and organize* your documents.

iDriver, developed by inFORM Decisions, Inc., is a low-cost AS/400 (iSeries) native software driver add-on that seamlessly enables printing from an AS/400 directly to Toshiba e-STUDIO equipment. Now, organizations with AS/400 environments can take advantage of e-STUDIO's robust printing, output, and finishing capabilities, including laser printing, color, output bin selection, hole punching, stapling, and more.

iDriver's results can be dramatic: documents will have more impact and deliver a higher return on investment.

The results of this new capability can be dramatic: laser-quality presentations, full-color reports, and customized forms have a far bigger impact and can

generate a higher return on investment. Finally, your organization can say good-bye to boring business communications.

To meet your organization's document application needs, i-Driver offers three methods of operation: Manual, Automatic, and Immediate.

- **Manual Operation:** Using the Manual Operation mode, users select their AS/400 spool file (print output file), choose the desired finishing/output/formatting options, and send the print jobs to the e-STUDIO device.
- **Automatic Operation:** This method utilizes an automated server to capture spool files with user-defined attributes and applies user-pre-defined finishing/formatting options to the spooled files that meet the specific criteria.
- **Immediate Operation:** The Immediate method allows a programmer to embed a call to the iDriver API (application programming interface) program that will add the finishing options to the spooled file without user intervention. This method eliminates the automated server that would normally run in the background.

### Full e-STUDIO functionality

With iDriver, your organization can leverage the full functionality of e-STUDIO devices, with laser printing capability and finishing options combined with report formatting, font selection, and data re-mapping tools. This allows AS/400 forms and reports to be customized in a variety of ways, in a menu-based environment and with no re-programming required. Users can easily format and output AS/400 forms and reports by selecting portions of their spooled file, assigning

allows print managers to maintain control of data. And for convenience, iDriver is easily downloaded and upgraded via the Web.

multiple font selections, and then re-mapping their print output to desired locations on a page.

### Higher speed, better control.

Because the iDriver program is native to the AS/400, data does not need to be downloaded or exported to external print servers—which speeds up the print process and

### AS/400 (iSeries) System Requirements

- The minimum operating system level for IBM OS/400 must be Version 4 Release 4 (v4r4).
- The minimum amount of available space required to install iDriver required is 313MB.
- TCP/IP must be running on the AS/400.

iDriver has been thoroughly tested on versions V4RM0, V5R1M0, and V5R2M0. This program is compatible with Toshiba's e-STUDIO GL1010 and GL1020 controllers.

### iDriver and Toshiba

iDriver is a low-cost program that can dramatically increase the impact of your documents. Call your Toshiba representative today for more information on how iDriver and other Toshiba Document Solutions can help *your* organization.
